

BRAND ASSET SYSTEM

Logo usage guide

Production files, safe use and digital implementation

Approved logo versions

Always select the artwork for the background beneath it.

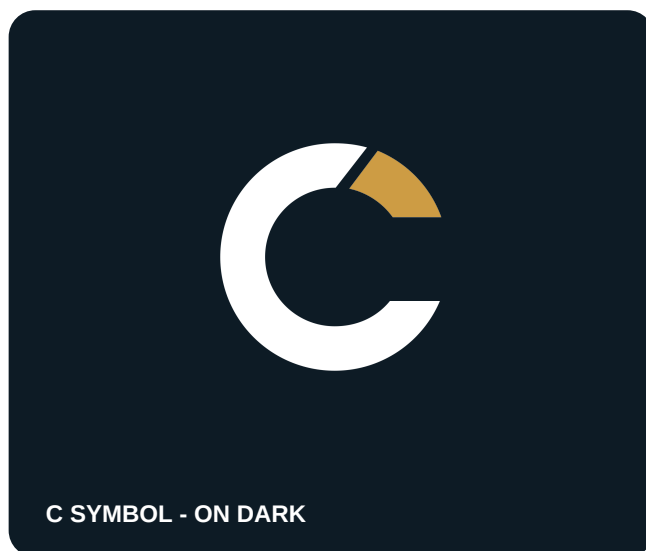

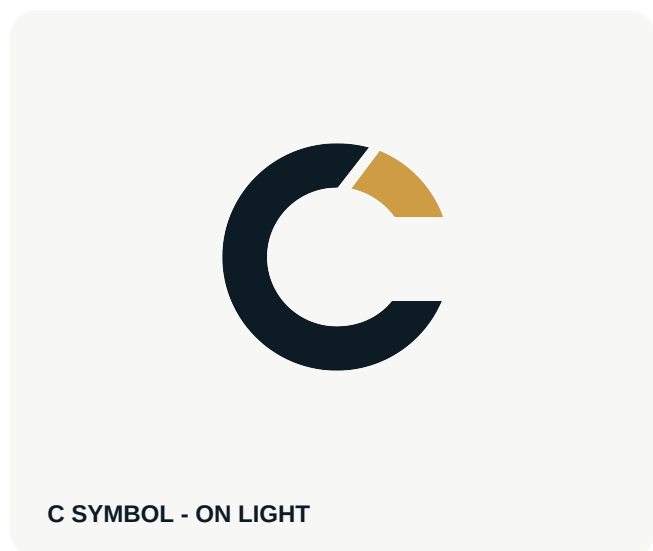

PRIMARY - ON LIGHT

REVERSED - ON DARK

C symbol and social profiles

Use the C when the full name would be too small or redundant.

Light profile master

Dark profile master

Clear space and minimum size

Give the mark room to remain recognisable and authoritative.

CLEAR SPACE

Maintain empty space equal to the width of the main C stroke on every side.
The prepared social files already include crop-safe padding.

MINIMUM SIZE

Full logo	120 px digital / 30 mm print
C symbol	24 px digital
Bicolour C preferred	32 px or larger
Below 32 px	Use prepared favicon assets

Forbidden usage

Consistency protects recognition and credibility.

- Do not stretch, compress, rotate, skew, crop or rearrange the artwork.
- Do not recolour, resize or reposition the gold segment.
- Do not recreate the wordmark using live text or a substitute font.
- Do not add shadows, glows, outlines, gradients or decorative effects.
- Do not use the navy version on dark backgrounds or white on pale backgrounds.
- Do not place the logo over busy photography without a clean holding area.
- Do not violate the minimum clear space or use illegibly small artwork.
- Do not use the original raster preview as a production master.

Website implementation

Keep the complete lockup as SVG. Do not combine the C with typed text.

```
<Image  
  src="/brand/cytria-logo-on-light.svg"  
  alt="Cytria"  
  width={190}  
  height={70}  
  priority  
>
```

HEADER AND FOOTER

Use the on-light SVG on white and pale surfaces. Use the on-dark SVG on navy or dark surfaces. Preserve the SVG viewBox and set only one display dimension when possible, allowing the browser to retain its natural aspect ratio.

FAVICON SYSTEM

Copy the contents of 04_Web to the public directory and reference favicon.svg, apple-touch-icon.png and site.webmanifest from Next.js metadata. The SVG favicon adapts the navy portion for dark browser themes while retaining Cytria Gold.

PRODUCTION NOTE

The supplied reference included a subtle raster texture. The production masters use flat colours for consistent reproduction, cleaner small-size rendering and consistent reproduction across backgrounds.
